1. Abstract

The Multi-City Trip Planner is a web-based application designed to simplify and optimize the process of planning complex travel itineraries across multiple destinations. The system enables users to create customized travel routes with multiple cities, incorporating layover management, cost calculation, and travel logistics in a single platform. It provides an intuitive interface for selecting travel dates, comparing airline options, and visualizing routes through an interactive map view.

The application integrates features such as automated cost aggregation, visa requirement information for each destination, and a comprehensive trip summary. Users can save, edit, and share their itineraries, as well as export them as PDF documents for easy access and offline use. By leveraging modern web technologies such as React.js, Node.js, REST APIs, and optional database support, the system ensures efficient data handling and a responsive user experience.

This project aims to reduce the complexity of multi-city travel planning by offering a centralized, user-friendly solution that enhances decision-making, improves organization, and provides essential travel insights in real time.

2. Module Mapping

Module Name	Assigned Roll Number(s)	Signature
Route Builder Layover Display Cost Summary Date Picker Visa Info Panel	2520030207	
Airline Compare Trip Export PDF Saved Trips Share Itinerary Map View UI/UX Design	2520090095	

3. Module Details

- **Route Builder:** Allows users to create and customize multi-city travel itineraries by selecting destinations and travel sequence.
- **Layover Display:** Displays layover duration, connecting flights, and waiting time information between routes.
- **Cost Summary:** Calculates total travel expenses including ticket fares, taxes, and additional charges.
- **Date Picker:** Enables users to select and validate travel dates using an interactive calendar.
- **Airline Compare:** Helps users compare airline options based on cost, travel duration, and ratings.
- **Visa Info Panel:** Provides visa requirements, travel restrictions, and necessary travel information for selected destinations.
- **Trip Export PDF:** Generates downloadable PDF summaries of complete travel itineraries.
- **Saved Trips:** Allows users to save, edit, and manage previously planned trips.
- **Share Itinerary:** Enables users to share travel plans with others through links or downloadable formats.
- **Map View:** Displays destinations and travel routes visually using interactive maps.
- **UI/UX Design:** Ensures the application is responsive, user-friendly, and visually appealing.

Koneru Lakshmaiah Education Foundation

(Deemed to be University estd. u/s. 3 of the UGC Act, 1956)

Off-Campus: Bachupally-Gandimaisamma Road, Bowrampet, Hyderabad, Telangana - 500 043.

Phone No: 7815926816, www.klh.edu.in

4. Frameworks / Platforms / Software Used

HTML5, CSS3, JavaScript (ES6+), React.js, Node.js, Express.js, REST APIs, Axios, React Router, Context API / Redux, LocalStorage / MySQL, Bootstrap / Tailwind CSS, npm, Postman (API Testing)
